Art Unit: 2876

DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description:

Page 5, line 20: Substitute "a pay phone" with -a pay phone 32--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.
- 3. Claims 1, 3 6,11, 14 17, and 22 are rejected under 35 U.S.C. 102(e) as being anticipated by Hohle (US 6,199,762).

Re claims 1, 11, and 22 - 23: a system for managing a plurality of local lists of a single user, the plurality of local lists being at a plurality of remote appliances where each appliance holds a corresponding local list and includes a card reader (102), the system comprising,

A compact user-carried smart card (120) including a microprocessor and a memory storing a master list (see col. 1, line 15 - 38), the master list being configured for synchronizing with each host, the microprocessor being programmed to synchronize the master list with a local list on a remote appliance card reader to allow the user to

Art Unit: 2876

carry the smart card with the master list stored in the smart card memory to various remote appliance and synchronize the master list with the various list of the appliance (see col. 14, line 13 - 23),

Re claims 3-6, 14-17: the list include a plurality of entries and at least one of the entries is an address, a name, a telephone number, an email address (see Fig. 11).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 7 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hohle in view of an article entitled "PubliCARD unveils SmartPassky™, the first smart card-enabled password management system for heavy Internet users" by PubliCard [hereinafter the "article", cited by applicant].

The teachings of Hohle have been discussed above.

In addition to the teachings of Hohle, he also teaches the non-web-enabled appliance (see col. 1, line 20 - 25). However, Hohle fails to teach or fairly suggest the smart card memory includes an electronic bookmark and web-enabled enabled appliances.

The "article" discloses the smart card memory includes an electronic bookmark (URLs) and web-enabled appliances (see page 1, line 11 – 34).

Art Unit: 2876

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the smart-card memory to store a bookmark and web-enabled appliance as taught by the "article" to the teachings of Hohle in order to provide heavy internet users with easy access to the Internet sites with personal preferences such as bookmarked URLs. Also, such modification (i.e., a web-enabled appliance) would provide the operator with easier connection means to the Internet through the smart card hosting device (i.e., Personal computer) programmed with a dynamic programming language (i.e., JAVA, C, C++, etc). Furthermore, such modification would provide the simpler process of connecting to the Internet means and accessing the Internet sites by providing password to the prompted application on the display of the web-enabled appliance, and therefore an obvious expedient.

6. Claims 8, 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hohle in view of Teicher (US 5,744,787).

The teachings of Hohle have been discussed above.

Although, Hohle teaches the smart card system, he fails to teach or fairly suggest the memory include an electronic wallet.

Teicher discloses the electronic wallet (9) (see Fig. 4; col. 1, line 21 - 57).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the conventional electronic wallet as taught by Teicher to the teachings of Hohle in order to provide a easier and quicker transaction of purchase at the point of sale (POS) terminal, gas station, or the like. Such modification would provide a constant acknowledgement of the value of electronic wallet every time

Art Unit: 2876

the electronic funds are consumed by the customers (i.a., unlike the conventional/typical credit card which the customers have to wait until the monthly billing statement or to call the customer service center to verify the past transaction. Furthermore, such modification would provide the easier replenishing the value of the electronic wallet by authorizing cash/money transfer from the bank account (i.e., the checking account, the credit card) to the smart card using ATM, telephone, Internet transaction, or the like, then the value of electronic wallet on the smart card will be replenished during the next authorization process, and therefore an obvious expedient.

7. Claims 9 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hohle in view of Taylor (US 5,578,808).

The teachings of Hohle have been discussed above.

Although, Hohle teaches the smart card system, Hohle fails to teach or fairly suggest that at least one of the pluralities of entries is a password

Taylor teaches the password (PIN) (see Fig. 1; col. 3, line 21 – 40).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the notoriously old and well known password as taught by Taylor to the teachings of Hohle in order to provide a secure process of the accessing each application on the smart card by assigning each application with its own unique password. Also, such modification (assigning the password with its own application) would prevent accidental processing of a particular application, since each application password can be different from other application's password and only the

Art Unit: 2876

application with correct assigned password can authorize the processing, and therefore an obvious expedient

8. Claims 10 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hohle in view of Chen et al. (US 5,694,471).

The teachings of Hohle have been discussed above.

Although, Hohle teaches a smart card system, Hohle fails to teach or fairly suggest that the smart card having encrypted password to control access the master list.

Chen teaches the using encrypted password to access the application onto the smart card to access the application onto the smart card (420 – 450)(see Fig. 5; col. 2, line 9 - 39; col. 10, line 14 - 31).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the well known encrypted password as taught by Chen to the teachings of the Hohle in order to provide an improve authentication process to access the master list within the smart card. Also, such modification would provide a secure synchronizing process by having the conventionally known encrypted password assigned to the smart card to be verified by the remote appliance to synchronize between the local list in the remote appliance and the master list on the smart card, therefore and an obvious expedient.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure;

Dancs et al. [US 6,141,752], White et al. [US 5,983,273] disclose the smart card, Short et al. [US 6,194,992] discloses a mobile web information exchange device.

Any inquiry concerning this communication or earlier communication from the examiner should be directed to Seung H. Lee whose telephone number is (703) 308-5894. The examiner can normally be reached on Monday to Friday from 7:30 AM to 4:00 PM.

If attempt to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Lee, can be reached on (703) 305-3503. The fax-phone number for this group is (703) 308-5841 or (703) 308-7722.

Communications via Internet e-mail regarding this application, other than those under 35 U.S.C. 132 or which otherwise require a signature, may be used by the applicant and should be addressed to [michael.lee@uspto.gov].

All Internet e-mail communications will be made of record in the application file. PTO employees do not engage in Internet communications where there exists a possibility that sensitive information could be identified or exchanged unless the record includes a properly signed express waiver of the confidentiality requirements of 35 U.S.C. 122. This is more clearly set forth in the Interim Internet Usage Policy published in the Official Gazette of the Patent and Trademark on February 25, 1997 at 1195 OG 89.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0956.
